Trampoline construction | Konstruktion des Trampolins

Construction | Konstruktion

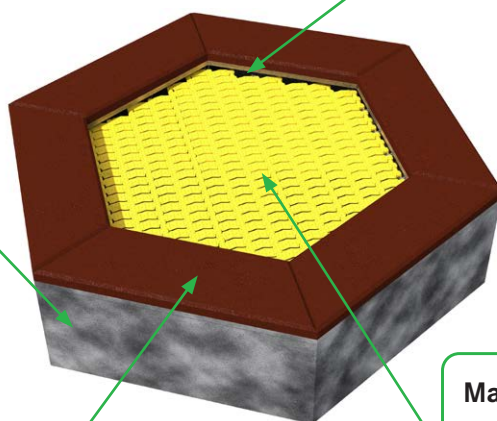

The body of the trampoline is shaped like a chest. It is made of thick welded sheet metal, which provides stability and durability of the trampoline.

Die Konstruktion des Trampolins besteht aus einem geschweißtem, verzinktem Stahlrahmen. Das gewährleistet die richtige Stabilisierung und gewünschte Lebensdauer des Trampolins.

Springs | Federn

Springs are very durable and allow jumping by bending the mat. They have been made to last for years in public facilities.

Die hochqualitative Feder ermöglichen sanftes Springen, ohne ungewünschten Geräuschen. Die Feder wurden so konzipiert, dass sie für den langjährigen Einsatz in den öffentlichen Bereichen geeignet sind.

**Elastic collar | Fallschutzumrandung**

Provides security to user and protects against falling outside the jumping area.

Die integrierte, weiche Umrandung sorgt für die Sicherheit der Nutzer. Sie schützt vor den Verletzungen beim Herausfallen aus der Sprungfläche.

Mat | Sprungmatte

The jumping mat is made of very durable lamellas threaded on steel cables. The lamellas have been designed to be durable and reliable, their specific surface prevents slipping.

Die Sprungmatte wird aus langlebigen und wetterfesten Lamellen gefertigt, die auf Stahldrähten aufgefädelt sind. Die Lamellenform verhindert das Brechen. Ihre spezifische Oberfläche schützt vor dem Verrutschen.

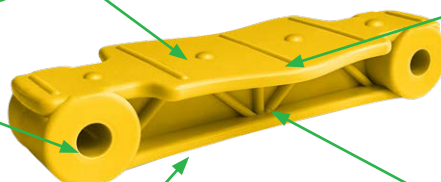

Non-slip surface.
Rutschfeste Oberfläche.

The wide lamella wings provide greater comfort when jumping.
Die breiten Lamellenflügel sorgen für besseren Komfort beim Springen.

Very durable, thick and strong bushings with high resistance for exploitation.

Dicke, sehr starke und langlebige Buchsen mit hoher Verschleißfestigkeit.

The lamellas are extremely durable thanks to specially designed reinforcements.

Die Lamellen sind dank speziell entwickelter Verstärkungen extrem langlebig.

Thanks to the unique shape of the lamellas, the space between them has been reduced to only 7 mm. This prevents small items such as keys or cell phones from falling inside the trampoline.

Dank der einzigartigen Form der Lamellen wurde der Innenabstand auf nur 7 mm reduziert. Dadurch wird verhindert, dass kleine Dinge wie Schlüssel oder Handys in das Trampolin fallen.

Trampoline construction | Konstruktion des Trampolins

Construction | Konstruktion

The Trampoline body is embedded directly in the ground. It is very stable and durable due to anti corrosion protection by hot - dip galvanizing.

Das Trampolin wird als ein Element in den Boden eingesetzt. Seine solide Konstruktion und Langlebigkeit verdankt es der Feuerverzinkung.

Safe surface | Sicherheitsbereich

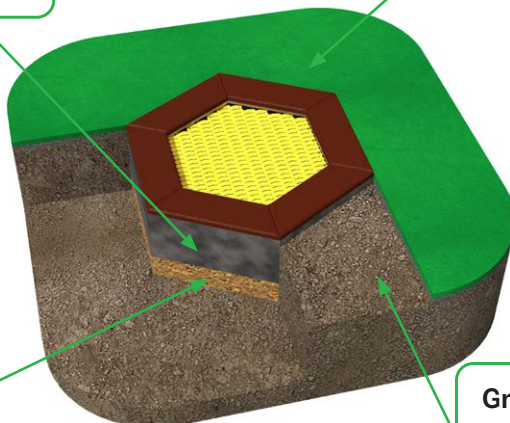

There should be a safe surface around the trampoline to protect children from falls.

Um das Trampolin herum sollte ein sicherer Bodenbelag vorhanden sein, der die Kinder vor Sturzfolgen schützt.

Hardened ground Befestigter Untergrund

The trampoline is directly mounted on the hardened and levelled ground, which needs to be permeable to water.

Das Trampolin soll direkt auf den befestigten, stabilen Untergrund gesetzt werden. Der Untergrund muss wasserdurchlässig sein.

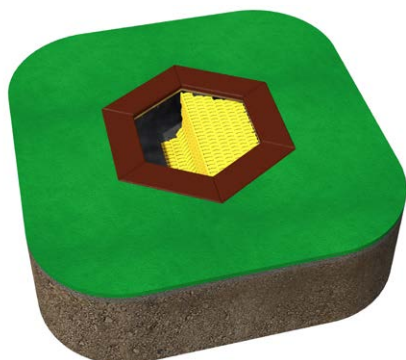

Ground | Boden

The trampoline is installed in the ground at a depth of 40 cm.

Das Trampolin soll in eine Grubentiefe von 40 cm eingesetzt werden.

Cleaning the inside of the trampoline | Reinigung des Inneraums

Variant I - removing the mat

Variante I - Entfernung der Sprungmatte

To clean the trampoline you need to remove part of the jumping mat. Removing the mat is simple and involves sliding the rope shackles from the springs located along the perimeter of the body of the trampoline.

Um das Trampolin zu reinigen, muss man ein Teil der Sprungmatte entfernen. Um die Sprungmatte zu entfernen, sollen die Seilschäkel von den Federn weggeschoben werden. Die Federn befinden sich auf dem Umfang der Konstruktion.

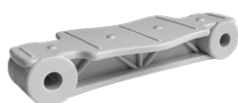

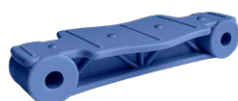

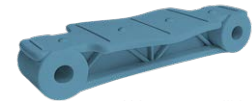

Variant II - opening the cover

Variante II - Eröffnung des Hebedeckels

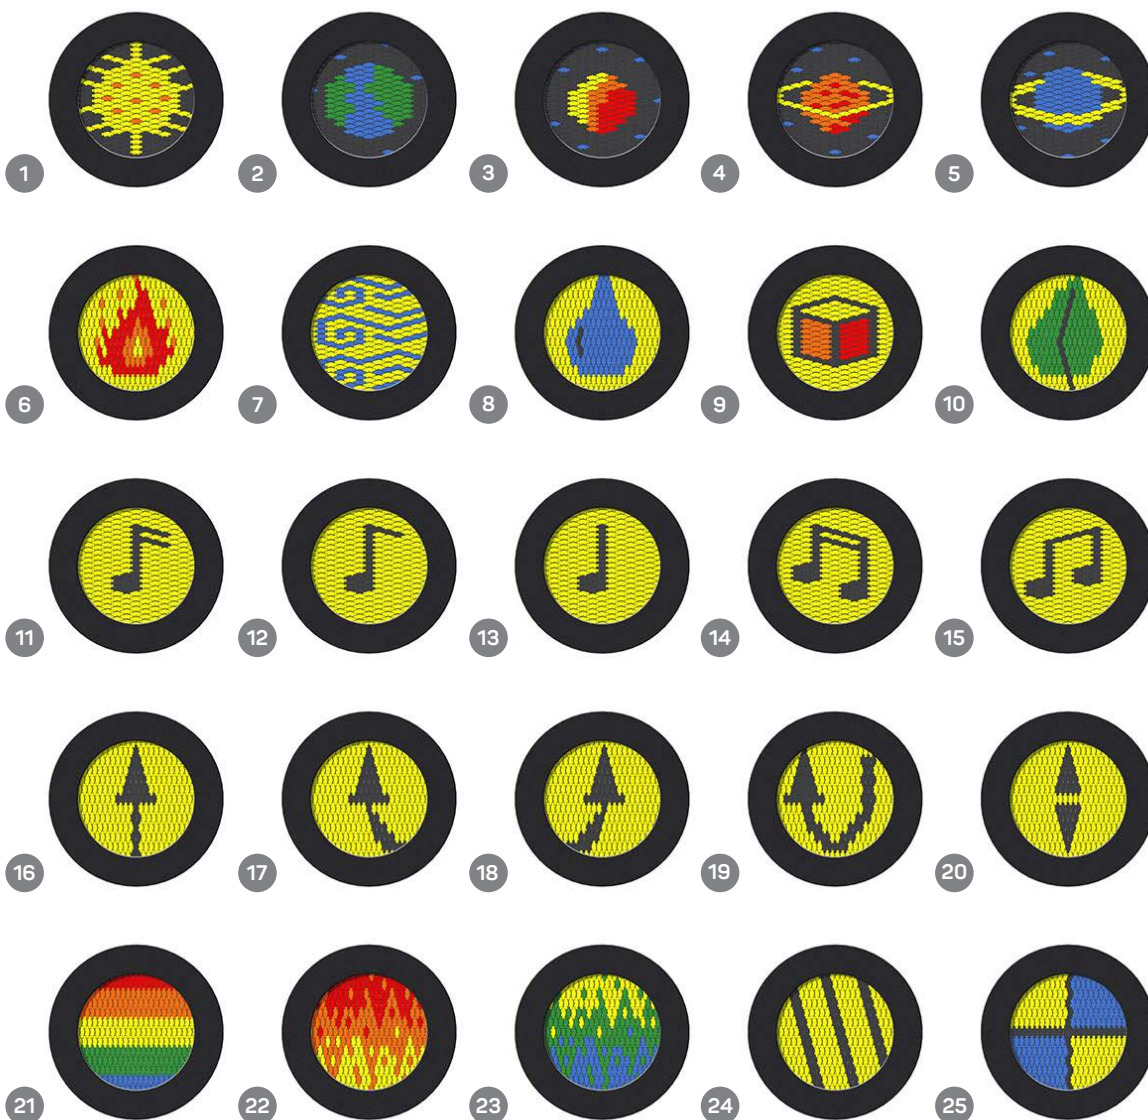

Once you open the cover of the trampoline, you can simply clean its inside.

Das Trampolin kann auch durch die einfache Eröffnung von Hebedeckels gereinigt werden.

How to choose slides for the existing embankment?

- measure the length of the existing embankment (L2),
- measure the height of the existing embankment (L1),
- check in the table which slide's values refer to the results of above measurements.

If only one value refers, adjust the embankment to the requirements of the second value.

You can change the height or length of the existing embankment by adding in or removing ground.

Wie wählt man Rutschen für den bestehenden Damm aus?

- Messen Sie die Schräglänge der bestehenden Böschung,
 - Messen Sie die Höhe der bestehenden Böschung,
 - Sehen Sie in der Tabelle nach, welcher Objektträger den gleichen Wert wie das Messergebnis hat. Wenn nur ein Wert gleich ist, passen Sie die Böschung an die Anforderungen des zweiten Werts an.
- Sie können die Höhe oder Neigungslänge der bestehenden Böschung ändern, indem Sie Erde hinzufügen oder entfernen.

How to form an embankment for a selected slide?

- choose the slide model,
- form an embankment keeping the length and height corresponding to the selected slide model.

Wie bildet man einen Damm für eine ausgewählte Rutsche?

- Wählen Sie das Rutschenmodell,
- Bilden Sie eine Böschung unter Beibehaltung der Neigungslänge und -höhe, die dem ausgewählten Rutschenmodell entspricht.
